

# SYNCHRONISATION

for TIP-ON for TANDEM

PRODUCT  
MEMO

 **blum**

## The mechanical opening support system

The new synchronisation for TIP-ON for TANDEM makes it possible to open wide fronts with just a light touch, no matter where you press on the handle-less front. TIP-ON can be used in the kitchen as well as other living areas.

## The new synchronisation feature gives you more outstanding advantages:

- Wide fronts open reliably and close securely
- The two-sided synchronised locking mechanism ensures a uniform front gap over the entire cabinet width
- No additional work is required on drawer or cabinet
- No additional space is required in the cabinet depth
- All components can be attached quickly and tool-free
- One version of synchronisation can be used for the entire TIP-ON programme (full and single extensions)

## Reliable opening... even for wide fronts

Even wide drawers and pull-outs can be opened with just a light touch – No matter where you press on the handle-less front. This ensures secure triggering anywhere on the entire furniture front.

We recommend synchronisation for drawers and pull-outs with a cabinet width of **600 mm and higher**.

## Ease of opening for handle-less fronts

A light touch is enough and the pull-out opens easily.

The pull-out opens at a position that is comfortable for the user.

Close the pull-out with a light push.
